

NEW DWELLING

**CERTIFICATE OF COMPLIANCE
ENERGY EFFICIENCY**

**Pursuant to Part 3.12 of the Building Code of Australia 2009
Volume 2**

A House Energy Rating Report (HER) was provided and/or details demonstrating compliance with the deemed-to-satisfy provisions of the BCA2009 as part of the Building Permit Process for the proposed new building works.

The report provided a table of features of the dwelling design and construction which were identified by the software as critical to the achievement of the rating and compliance with the Performance Provisions of the BCA2009 P2.6.1 & P2.6.2. If there has been any changes to these features proposed or during construction, the dwelling should be re-rated / assessed to ensure that compliance with the Performance Provisions of the BCA2009 P2.6.1 & P2.6.2 are maintained.

The builder and owner must check that these requirements have been carried out and certify that they have been completed in accordance with that house energy rating report and/or deemed-to-satisfy provisions of the BCA2009. If the dwelling has not been constructed to the standards listed in this report, further ratings/details must be provided to show that the required house energy rating or approved level of compliance has been achieved.

CERTIFICATION

I / We certify that the energy efficiency requirements of House Energy Report no.

for the construction of a dwelling at :

.....

have been completed so as to comply with the abovementioned report and the installation of a Rainwater Tank not less than 2000ltrs connected to all sanitary flushing systems or a Sustainability Victoria approved Solar Water Heater System has been completed.
